

## Smart Innovations Sweden.

Hello!

I am going to just briefly talk about how I came up with the idea to Skolett™ and even a bit quickly introduce myself.

In the winter of 2008 my family & I was reside in Sälen and skied when my 10 year old son Luke broke his leg, it resulted in scooter down the mountain and it ended sadly with the surgery and hospital stay at Queen Silvia's children's clinic.

A few days later we go again, my eldest son Oliver, 16 years got a fracture in his leg during a 24-hour handbollcup, hospital & Queen Silvia's clinic again. Both boys were now wearing ortroses and had big problems to get their shoes on. Fortunately, no fractures on Rasmus my 6 year old son (yet)!

When my mother, who came to visit "the invalids" was going home, she stood in the hall with her crutches and "rocked" up the trampled heel of her shoe, instead of asking for a shoe horn, and as she said:

"I do not want to cause any inconvenience, you need to help Oliver & Luke now."

Then I got me a slight attack, i went down to IKEA and bought ten shoehorn that I began to cut apart, tape, glue and file on in the garage. This resulted in the attached product Skolett™. While working with this innovation, I have got lots of positive reactions from people who tried the product.

This has served as a good fuel for my energy in a whole new world of rules and regulations when I started up my company, and securing my product.

I have got incredibly positive reaction from the people whom I have shown Skolett™ and this has reinforced my belief that this product will significantly enhance the quality of life for many people.

Your's sincerely

Magnus Lindblad
